(a) the step gives the whole sensitivity function
true |S|
from one step, (5)
P_4, SIMC PI
$M_s = 1.51$
slow integral:
no crossing,
$M_s = 2.61$
|S|
frequency ω (rad/s)
(b) the bounds close in on M_s as the record grows
upper bound
lower bound
P_3, PID
P_4, PID
lag-dom. PI
bound vs. true M_s (%)
record length / plant time scale T_a
